- Headphone socket • Size (mm) 358w x 120h x 260d • Weight 4.1Kg • free 30 day trial

## What is DAB Radio?

DAB stands for Digital Audio Broadcasting, this is a way of broadcasting radio digitally via a network of transmitters. It provides listeners with more choice, reduced interference with no hiss or crackle and scrolling text information.

### More Choice

Because of the way DAB technology works, broadcasters can transmit many more stations than ever before. Listeners in most major towns and cities in the UK can receive between 30 and 50 radio stations with a digital radio, in many cases that's more than double what's available on analogue. Because digital radio uses the spectrum more efficiently than analogue, it is possible to broadcast more channels using the same frequency, making room for broadcasters to expand their station portfolios.

### Less Noise

DAB transmission eliminates the hiss, crackle and fade so familiar on analogue radio. With a digital signal you either receive it or you don't.

### Ease of Use

A DAB digital radio will tune to a station at the touch of a single button. No more fine tuning a station to get the best reception. A DAB set allows the listener to scroll through a list of available stations in alphabetical order - then tune in by pressing the 'select' button.

## What makes Roberts environmentally friendly?

We are continually working to improve the energy efficiency of our products for the benefit of the environment and our customers. The new ecologic range offers class leading reduced power consumption with models now up to 6 times more efficient than other DAB radios on the market. Typically one of our ecologic radios consumes less power than ten low energy lightbulbs. Roberts' innovation also introduced the world's most energy efficient DAB radio - solarDAB.

### What does this logo mean?

All our ecologic radios carry this logo on the packaging. The eco tick denotes a minimum standard of environmental performance using key technologies such as:

- Switch Mode Power Supply - this enables significantly lower operational and standby power consumption by eliminating wasted energy
- Extended Battery Life - some models can operate continuously for up to 150 hours on a single set of batteries
- Solar Power - using free energy to power your radio
- Built in Battery Charging - several models feature a built in battery charger for charging your rechargeable batteries

### The Energy Saving Trust Recommended logo

Digital radios are now more energy efficient than ever. Products endorsed by the Energy Saving Trust have to satisfy a criteria set by an independent panel of experts. Only the most energy efficient products carry the EST mark or Eco tick, making it a quick and easy way for you to identify products that have met the strictest criteria on energy efficiency. These products will cost you less to run, contribute towards savings on your energy bills and help reduce carbon emissions. Roberts is continually developing products that not only meet the EST minimum criteria but in many cases far exceed it.

# ConnectR

ConnectR is a free application that once downloaded, acts as a remote control for your Wi-Fi radio. Using your iPod touch or iPhone you can connect to either one or several Roberts internet radios and control them all wherever they are in the house via your wireless internet connection.

**FREE**  
Remote Control App

Available on the  
**App Store**

## What is Connected Radio?

ROBERTS internet radios enable you to connect to over 15,000 internet radio stations from all over the world and also offer a 'Listen Again' feature that allows you to listen to previously broadcast programmes at your leisure.

Browsing stations is really simple thanks to on-screen radio station listings that are automatically updated and conveniently sorted into country or genre. All you need to get started is a broadband internet connection with either a wireless router or wired Ethernet connection.

Last.fm is an Internet-based on-line music service with millions of tracks available which you can access using your internet radio. It plays tracks based on your choice of artists or styles and your listening history. Last.fm also learns about your musical tastes from the music that you may play from your computer. Last.fm can introduce you to a new range of artists and music which you will probably enjoy but you may never have heard before.

## Media Streaming

The Media Streaming function allows you to use your internet radio to play music files which are stored on a computer or other storage device on your network. You can plan your listening in advance by setting up playlists of your favorite tracks and playing them via your Internet radio at your leisure. Most stored music will typically be MP3 or WMA files, but most of our radios will also play other formats such as AAC (iTunes) or FLAC. Some of our radios also allow you to play files from a USB memory device which is plugged into the radio.

## Why internet?

- Access over 15,000 radio stations from around the world
- Stream your personal music collection from your PC to your radio. Listen to your entire digital music collection away from your PC
- Listen to podcasts it can be your favourite radio programme, DIY tips or even foreign language lessons
- Your radio is automatically updated with new software
- Listen again features, radio on demand has never been easier
